

**AN OPTION SELECTOR AND ELECTRONIC DEVICE INCLUDING  
SUCH AN OPTION SELECTOR**

**ABSTRACT OF THE DISCLSOURE**

5

A electronic device (1) comprising a housing (24), a processor (3)  
and a display screen (5) mounted to the housing (24) and coupled to the  
processor (3). The electronic device (1) also has a bezel (21) surrounding  
the display screen (5), the bezel (21) being rotatably mounted to the  
10 housing (24). A position detector (26) is operatively coupled to the bezel to  
provide a signal indicative of a rotational position of the bezel (21) relative  
to a predetermined datum of the electronic device (1). The position  
detector (26) is electrically coupled to the processor (3) to permit, by  
selective rotation of the bezel (21), user selectable options displayed on  
15 the display screen (5).
